

Introduction

Welcome to the POS System Manual. This guide will help you understand how to set up, use, and troubleshoot your Point-of-Sale (POS) system for accepting crypto payments.

What is this POS System?

This is a web-based POS system designed to facilitate crypto currency transactions. It allows merchants to accept payments in USDT (or other crypto) directly into their crypto wallets without the involvement of banks.

Key Features:

Web-based system (accessible from any device with a browser)

Supports manual card entry, pre-auth codes, and Apple Pay tap payments

Direct crypto wallet integration

Secure and fast transactions
